

MTC Thermal Ceiling

Aragona®MTC Thermal Ceiling for treatment of hypothermia and to maintain normothermia, frequently used in burn treatment, pre and post operatively.

Well known and documented treatment, proven to increase patient comfort, without hampering accessibility and supervision. Developed together with medical expertise and used worldwide since 1982.

There is no need for expensive accessories like mattresses or blankets to achieve optimal thermal comfort for patients. The maximum running cost is 0,5 kW electricity per hour.

Aragona®MTC Thermal Ceiling is attached to a 4-wheelstand with two (2) lockable wheels. It can be raised and lowered with little effort due assistance from a gaspressureised spring. The Aragona®MTC is also foldable to enhance transport and storage.

The energy output is manually controlled and supervised by a digital control system. A display shows the patient skin temperature in centigrade.

Technical data:

Power supply:	230-240V/50 Hz
Connection:	5 m cord with plug
Power cons:	500W (4x250W)
Class:	1 Type: B
Length:	1200 mm
Width:	600 mm
Height:	
Total stand:	1990-1490 mm
Heating panel:	1860-1360 mm
Weight:	35 Kg
Standard:	SS EN 60601-1
